Deception Systems

In modern networks prevention has a hard time to keep IT-infrastructures safe and secure. New attacks can bypass defenses and new business challenges require more accessible services.

IT infrastructure is vital for any company’s day-to-day business and an increase in complexity can consequently be witnessed. Additionally, attack concepts adapt quickly. As a result, conventional security systems have a hard time catching up and keeping networks clean.

CyberTrap is a revolutionary new step in cybersecurity. Instead of blocking attackers, they lead them into a contained, monitored environment to track them inside the network to gather intelligence. In CyberTrap’s scenario, the attacker will not only show them the holes in the fence, but also tell them who he is and what he is looking for.

CyberTrap operates from behind the Firewall and acts as an additional layer of protection and extension of the existing security systems.
Competitive Advantages

- Highly specific and clean threat intelligence
- Strengthens other security investments with exclusive Zero-Day attack intelligence
- Custom tailored solution
- Real-time attack visibility
- Usability for all levels: from quick and functional overview to in-depth analysis
- Also available as a managed service: accessible, cost-effective, hassle free

Target Markets

- Private organisations
- Large enterprises
- SMEs
- Governmental institutions
- EU countries

Use Cases

- Large enterprises and government agencies: Deception security as a managed service based on a subscription model
- Distribution: Engineering or cybersecurity companies with strong local business network

References

- Products are based on 15 years of cybersecurity know-how
- Technology is actively being used and continuously improved by one of the biggest white hat hacking companies in the world
- Clients include DAX companies and ministries in Europe and Asia

Company

- Founded: 2015
- Founders: Jack C. Wagner (CEO) Avi Kravitz (CTO)
- Headquarters: Vienna (Austria)
- Location: CyberTrap Software GmbH Eßlinggasse 7/3 1010 Vienna Austria
