

# Indexima

# Digital Infrastructure

## THREE KEY INNOVATIONS Simplicity and Performance Oriented

### Hyper Index

Performance x1000  
Infra Costs cut

### Data Space

AI Algorithms  
Automatisation  
Unique Access interface

### Fast File Format

Column Oriented Storage  
Optimised for HyperIndexes  
Raw data fast access  
To be Open Sourced

## Zero Time to Data

Located between data sources and analytic solutions (Tableau, Excel, SAP, BO, QLIK, etc.), Indexima allows users to drill the entire set of Big Data with instant dashboard display, searching tens of billions of rows in just a few milliseconds.

Time to data is the time between the moment when a new KPI is recorded in your database and the moment when a business analyst can exploit it.

There are two ways to exploit this data: either you make a data extraction like a data cube or a data mart, which is very time consuming. Or you connect directly to your database with your BI tool, which can require an incredible number of servers.

With Indexima you just connect your BI tool directly to your raw data and get instant response time. Indexima is a mix of technologies (multi-column pre-aggregated indexes, AI algorithms, pre-calculated aggregates).

## Competitive Advantages

- High performance: HyperIndex accelerates the display of dashboards by a factor X1000 compared to any other competitor
- AI powered algorithms to constantly adapt to the needs of business analysts
- Unique point of access to all data: security policy and right access management centralised
- Security data is accessible from one single secure place with Kerberos, LDAP
- Possibility to query all big data directly from the source, in volumetrics of tens of billions of lines in just a few milliseconds
- Proven Technology, two years in production before commercial launch
- In-house IP development

## Target Markets

- Top 500 EMEA data native web companies & Top 2500 EMEA corporates
- Generic partners & Analytics and/or big data specialised system integrators
- Tier 1 countries targeted are UK, Germany, Nordics, BeNeLux, Spain and Italy

## Use Cases

- Generic pain point qualification: poor performance for any Business Intelligence use case regardless of data volume and data format
- Provide data analytics teams with fast data access times
- Give IT teams the missing "layer" in a fast analytics data driven landscape of Big data architectures (Hadoop Eco system i.e. HortonWorks or Cloudera customers cases)

## References

- Customers: Natixis, Mappy, Canal+, Swiss insurance company, EDF
- 2018 hot leads pipe for France: €3M ARR
- Investors: Seventure Partners, Founders
- Public support: BPI France, Wilco, Region Ile de France
- Partners integrators: Accenture, CGI, Actinvision, SOPRA STERIA, Groupe Synaltic, Keyrus, Micropole, Talan
- Admitted to the acceleration programs of Agoranov, Wilco, Startup HPE and EIT Digital
