QuantifiCare’s solutions help objectively investigate, analyse and document treatment safety and effectiveness using advanced 2D and 3D imaging technology and services.

The contract research organisation (CRO) offers pre-clinical to phase I-IV clinical trial services across a wide range of clinical areas to pharmaceutical, biotech and cosmetic industries. Physicians benefit from proven success in clinical trials.

QuantifiCare adapted their existing solutions to easy-to-use, compact, portable, fast, and all-in-one 3D and 2D photographic systems for standardised photodocumentation dedicated to dermatologists, plastic surgeons and aesthetic practitioners.

QuantifiCare supports physicians in equally improving their communication and better understanding the needs of their patients in their daily practice.

QuantifiCare is developing, manufacturing and marketing innovative imaging solutions for clinical trials and physicians. The global company is specialised in 2D and 3D photography of the skin.

3D imaging systems and clinical photography services
Competitive Advantages

- The physician can photograph, measure and show what the patient will look like after the treatment with a portable 3D camera
- Fine detailed observation of the skin
- Quality and reproducibility
- Easy-to-use solutions
- Image centralisation

Target Markets

- Dermatology
- Aesthetic and cosmetics
- Wound care
- Infectious diseases
- Oncology
- Ophthalmology
- EU, US, Brazil

Use Cases

Imaging systems:
- 3D skin care and complexion analysis
- Before and after comparison
- 3D aesthetic simulation software
- Assessment of facial measurements & ratio, breast measurements & asymmetry and body circumferences

Clinical services:
- Image procedure and training
- Quantitative measurements
- Quality control
- Image centralisation
- Project management
- Central expert reading
