

HOW DOES Jukeboss WORK ?

The participants of public or private events download the application in their mobile. They choose from a list of available songs. An interface displays the most popular music track to the disc-jockey or animator, enabling him to meet the audience's musical wishes for more successful events or private parties.

Jukeboss is also suitable for radios and can be used through various usages. The five students work continuously for its improvement and the application will soon be automated.

They all talk about Jukeboss :
