

Wim Korevaar is facilitated by EIT ICT labs, did his studies in Business Administration and Electrical Engineering simultaneously at the University of Twente, The Netherlands. He is doing his PhD and sets up a company: [StructWeb](#).

sStructWeb develops advanced, intuitive information systems for organizations helping them to structure their information and make it accessible for employees and customers. He has a passion to be in the forefront of technology, design and business.

He identifies several benefits of participating in a (doctoral) summer school. It helps building partnerships, exchanging knowledge, keep up-to-date with the state-of-the-art in the academia and the brainstorm sessions allow for exploring new opportunities.

Getting in touch with, and learning from senior keynotes speakers and entrepreneurs, is another benefit of joining the EIT ICT labs summer school.

A suggestion for upcoming summer schools is to involve more keynote speakers from renowned companies, such that the current academic program is complemented by the experiences of specialists from the field.
